In response to the 8/17/05 Appeal Brief, the search was updated and a new reference was found that is pertinent to the pending claims. A new grounds of rejection relying upon the newly discovered reference is below.

***Claim Rejections - 35 USC § 102***

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 3-18 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Muller et al. (USP 5,273,905).

Muller et al. teach a method and apparatus for the sequential multi-stop processing of slides for staining comprising a liquid dispensing means, heating means and aspiration means. Column 4 lines 4+ teach microprocessor control of both the heating and movement of the sample to chambers of different volumes based upon desired analysis. This has been read on the claimed "... dispenser orifice and slide housing being capable of relative movement to each other under microprocessor control ..." (e.g. the dispensing orifice is move to a different chamber based upon the analysis and volume required). Column 4 lines 27+ teach multiple processing stations that are modular in design having "quick connect/disconnect" means to fluidic and electrical supplies which has been read on the claimed "... hose transport mechanism... ". Column 15 lines 8+ teach block member(37) with good heat transfer characteristics is adjacent to the glass slide which has been read on the claimed "heater"/"heating element is adjacent to the slide". Column 66 lines 54+ teach the fluid is remove "either

by suction .... or by flowing a washing fluid or the like through the chamber..." which has been read on the claimed "liquid aspirator".

***Response to Arguments***

Applicant's arguments have been fully considered and are persuasive. The final rejection of 9/24/04 has been withdrawn in favor of the new rejection above.
